

Le cours

**« Questions spéciales de psychologie cognitive
et neuropsychologie – PSYC-E-504 »**

sera dispensé cette année par le

Prof. Dr Tom BECKERS
Faculty of Psychology & Educational Sciences
KU LEUVEN

sur le thème général :

THE ROLE OF CONDITIONING

DATES DES COURS

LUNDI 17 MARS : 13 h – 18 h 30 – Forum B (Plaine)

- *Conditioning : association or cognition? A bit of research on animal conditioning/cognition and how it relates to human causal and contingency learning, partly my own, partly of others.*
- *The role of classical conditioning in clinical phenomena: I. Addiction, tolerance and overdose.*

This would be one of the lectures I give in my psychology course for pharmacy students, on Pavlovian overdose. None of this is my own work, but it is very entertaining, clinically highly relevant, and little known.

LUNDI 31 MARS : 13 h – 18 h 30 Forum B (Plaine)

The role of classical conditioning in clinical phenomena: II. Fear learning and fear reduction.

This would be an overview of some of the work done in Leuven and elsewhere on fear learning, fear extinction and return of fear as laboratory models for acquisition of anxiety disorders, treatment and relapse.

JEUDI 3 AVRIL : 10 h 30 – 13 h – local R42.5.107

Erasing conditioned fear.

This lecture would deal with the fear-memory-erasure during reconsolidation research that we do in Amsterdam.
